

GED-I's GSA 2000 Achieves Approval for IBM Storage Environments

by Phil Leggiere
Friday, 24 October 2008

GED-I Ltd, Tel Aviv, Israel, a provider of storage encryption and security solutions, has announced that the "GSA 2000 - AIO" storage security appliance has successfully completed interoperability testing with the IBM System Storage DS3000 family of products to become an IBM System Storage Proven solution.

GED-I's GSA 2000 can be used for data encryption to meet compliance guidelines, regulatory requirements and business optimization needs utilizing the IBM System Storage DS3300 and DS3400 storage devices. This solution will allow the DS3000 to be utilized as the storage element in an encryption environment that utilizes the GED-I encryption and encryption key management.
